

In 2012, Gdansk Water Foundation ([GFW](#)), besides organizing trainings in order to enhance qualifications in the subjects of water and wastewater management, has also participated in promoting research outputs connected to the Water Research to Market Project, during WOD-KAN (Bydgoszcz) and POLEKO (Poznan) trades. Due to the fact that both of this trades differ in their main thematic as well as the target group, Gdansk Water Foundation had the chance to promote mentioned outputs in different work environments and into a wider group of end-users. During both promotion actions , a particular interest in the subject of lake and ground remediation, as well as in the concept of the sustainable development in environmental protection was visible. In addition, during both events, GFW has used diverse promotion materials and gadgets designed for that purpose (see pictures below).

To obtain more details regarding the work of Gdansk Water Foundation please visit our [web page](#) or check the project available on the [e-fair](#).

Business meeting during POLEKO trades in Poznan in November 2012.

Stand of Gdansk Water Foundation and Water RtoM project during POLEKO trades.
